REAL FIRE TRAINER

EDM's real fire trainer is designed and certified specifically to meet training requirements as defined in all international cabin crew training standards. It is designed for ease of operation from an instructional perspective with particular attention being paid o the speed and efficiency with which a training scenario can be set up, instigated, de-briefed and repeated.

Fire Scenarios

Each EDM 20ft container is designed to contain live fire training in the following areas:

- Gallery oven fire
- Overhead bin fire
- Under-seat fire
- Lavatory

KEY FEATURES OF EDMS REAL FIRE TRAINER:

- ✓ Configurable to specific training requirements and customer training facility contraints
- ✓ Designed and built to meet international regulatory standards
- ✓ Bespoke Instructor Operator Station (IOS)
- ✓ Standard 2 year warranty and full worldwide service and support
- ✓ Extinguisher refill station

All fires are propane-fed and fully controllable by a Mobile IOS (tablet) and operator-held pendant, with two main, selectable levels of intensity. Plus, as standard, EDM supply representative machined block itesmd to represent, tablet fire, laptop fire and mobile phone fire.

Three simulated aircraft extinguishers are also supplied to EDM as standard, and we will modify with the components to allow interface with our filling system. We will also priovide will provide simulated smoke machines, for adding simulated smoke effects to the aforementioned fire locations (4 off). These can be remotely controlled from the IOS with selectable levels of intensity / timing.
